Attn: careers@stocksy.com

Hello,

I am applying for the Full Stack and Front End Developer positions you have posted on your website. I am currently the lead UI developer at Quester Tangent, where I've been for the past three years. I am now looking for an opportunity to expand my skill set while continuing to build a career that allows me to be creative, solve problems, and learn new skills. I am particularly interested in Stocksy for the opportunity to work with an experienced and creative team, that supports a healthy work/life balance. You can find my most up-to-date resume at sarahrosannabusch.ca.

I graduated from the *Electronics and Computer Engineering Technology* program at Camosun College in 2017, where I learned the fundamentals of electronics engineering, including both hardware design and software development, from firmware to graphical user interfaces. Because of my lifelong love of art and logic, my favourite projects were the ones where I got to create web-based user interfaces for Internet of Things devices. I accepted the position of Junior UI Developer at Quester Tangent when they were looking for someone to rewrite their front end, using vanilla javascript only. For me it was the perfect opportunity to master the fundamentals. I spent my first year there doing just that, under the guidance of senior developers. My second year at Quester Tangent I designed and wrote a custom, modular, and configurable front-end framework to be used in all future projects, and implemented its core feature set. Over the past year, I have been team lead for our 3-5 person front-end team. Now that I have mastered the fundamentals of javascript, node, html, css, and json, I am looking to expand my experience and skill set, while lending my expertise in writing well documented, robust, efficient, testable, and maintainable code.

I am looking to join a company with great culture that is creating a valuable product, and to work within a team that I can learn from that would benefit from my existing skill set. With my skill level and experience I am looking for an intermediate role and salary, however, I currently work a 4 day (32 hour) work week, to maintain a healthy work-life balance, and would prefer to stick to that schedule.

I look forward to hearing from you to discuss the position and my qualifications, at your convenience.

Sincerely,
Sarah Busch
